

SMART RESUME SCREENER

Find the perfect candidate, faster — AI-powered resume screening

Live Demo: ai-resume-screener-nu-green.vercel.app

THE PROBLEM

Manual resume screening doesn't scale

23 hrs

avg. time recruiters spend screening
resumes per hire

250+

applications received on average for a
single job posting

88%

of resumes are rejected by filters before
a human ever sees them

Recruiters need a faster, fairer, and more consistent way to shortlist candidates.

THE SOLUTION

Paste a job description, upload resumes, get a ranked shortlist

1

Upload

Paste the job description and upload candidate resumes (PDF)

2

AI Scoring

AI scores each resume across 4 weighted criteria

3

Rank & Analyze

Candidates are ranked with batch analytics & score distribution

4

Export Report

Download a polished, multi-page PDF report

TECH STACK

MERN + AI, deployed on Vercel

React + Tailwind

Frontend UI, components & styling

Node.js + Express

REST API — controllers, routes,
middleware

MongoDB

Candidate, ScreeningBatch & User
models

JWT Auth

Secure email + Google sign-in

Also: an AI/LLM API (Gemini / OpenAI) for resume scoring, and a report service that generates downloadable PDF reports.

KEY FEATURES

What the app does

AI-Powered Scoring

Multi-criteria score (0-100) for every resume, with a written justification

Batch Processing

Analyze dozens of resumes against one job description at once

PDF Reports

Download a professional, multi-page report for offline review

Secure Auth

Email/password or Google sign-in, protected by JWT middleware

Screening History

Every past batch is saved and browsable later

Strengths & Gaps

Auto-tagged candidate strengths and areas for improvement

HOW IT WORKS

System architecture

Every scoring request also triggers `services/reportGenerator.js` — turning the AI's JSON output into a downloadable PDF report.

Deployed on Vercel with continuous deployment from GitHub — every push auto-builds and ships to production.

LIVE DEMO

Landing page

1

Clear value proposition: “Find the Perfect Candidate, Faster”

2

Email/password or Google sign-in to get started

3

Three headline features shown right on the homepage

LIVE DEMO

Running a screening

The screenshot shows a web browser window with the address bar displaying 'ai-resume-screener-nu-green.vercel.app/screener'. The page has a dark blue header with a logo on the left, 'Screener' and 'History' links in the center, and a user profile 'Mukesh' on the right. The main content area is light blue and features the title 'Smart Resume Screener' with the tagline 'Instantly transform resumes into actionable intelligence.' Below this is a white form box. Inside the form, there is a 'Job Description' section with a large text area. Below that is an 'Upload Resumes (PDFs)' section containing a blue 'Choose Files' button and the text 'No file chosen'. At the bottom of the form is a large blue button labeled 'Screen Resumes'.

1

Paste in the job description

2

Upload one or many resume PDFs

3

Click "Screen Resumes" to run the AI analysis

AI-generated results & analytics

CHALLENGES & LEARNINGS

What I ran into — and how I solved it

Getting the AI to score consistently

Designed a structured prompt with 4 fixed criteria (Experience, Skills, Project Quality, Educational Fit) so every resume is judged the same way

AI/API calls can fail or time out

Added error handling so a failed screening shows a clear retry message instead of crashing the UI

Turning AI output into a shareable artifact

Built a dedicated reportGenerator service that converts the scored JSON into a polished, multi-page PDF

WHAT'S NEXT

Roadmap & future improvements

Bias & fairness checks

Audit AI scoring to reduce unintended bias

Team accounts

Shared workspaces for recruiting teams

Fine-tuned matching

Improve scoring accuracy with domain-specific data

ATS integration

Connect with tools like Greenhouse or Workday
